## Your Selling Approach: Slick, Data Dump or Trusted Advisor?

By Ron Snyder

Have you ever observed a slick sales person tell a buyer all the reasons to buy something before the buyer decided if there was any reason to buy what they were selling? Have you found it frustrating to get the information you wanted on the website of a potential product or service provider?

You have probably noticed that some sales people and websites dump piles of facts on the buyer while others make information available in a manner that is organized to respond to the buyer's thought process. In dealing with *these* sales people or websites, it's almost as if they could read your mind... and give you exactly what you wanted.

### Complex Sales

The more complex the sale, product or service, the more important it is to be a trusted advisor.

- Does the purchase involve choices that require detailed consideration of multiple choices and price points?
- Does the implementation or usage impact many people?
- Is there significant risk involved- for example, mission critical processes and data, new technology, a new way of doing business or concerns about technology obsolescence?
- Does it require a long-term relationship - including support, maintenance, upgrades?

Read on to learn how to become a trusted source of information and guidance.

How easily and quickly can your buyer:

- Get trustworthy information they can use to make buying decisions?
- Select the best configuration and tailor it to meet their needs?
- Determine that the value/ROI is clearly beneficial to them?
- Resolve their concerns?

### Aligning Buying and Selling

Synchronizing the steps of the buying and sales processes will:

- Accelerate the sales process by ensuring that every selling activity is in step with the buyer's needs
- Improve conversion rates between key sales milestones by having an effective sales approach and sales tools to help the buyer move forward
- Increase the return on marketing programs because each deliverable supports the buying process

Today's business buyer has as many goals and pressures as you, so they need to be able to find the information they want easily and quickly. They are looking for a trusted advisor who will provide credible information and guidance. To do this, you must truly understand your buyer and their process.

## How to become a Trusted Advisor?

### 1. Understand your buyer's behavior

There are many ways to gather buyer feedback- from online surveys and comment forms to interviews by third parties. You can also observe buyers using your site and listen to them talking with your salespeople. This will enable you to identify where your process breaks down and what type of interaction would be most helpful to them.

### 2. Streamline the process

Poll your most successful sales people. Chart the key milestones in their sales processes. Using input from your buyers, fine-tune the milestones to ensure that they are in synch with your buyers' needs. Train your sales team to manage their process to hit these key milestones like your superstars. Provide sales tools that help the buyer accomplish their objectives at each step of the process.

### 3. Adjust your interactions

Prioritize the ideas that you captured from your buyers, top sellers and web metrics. Make changes in your sales and web interactions to respond to the top challenges identified by your buyers. For example, adjust your website, automated tools and the methods your sales people use- to better fit your buyer's expectations. Certain sales people may need to modify their style to be more buyer-focused as opposed to driving the process from their perspective and objectives. You may need to add new online tools for direct use by buyers, while adding others for your sales team. In addition to adding information and tools to your site, look at the persona (the "personality" or style) of your website and fine-tune its layout, color and tone to resonate better with your target audience.

It will take effort and require rethinking the way you interact with your buyers. Being a trusted advisor, like being on top of your game, requires work every day... and it's worth it!
